

Assignment No. 3

Name: Sujit Tanaji Patil

Class: MBA 1

Power BI Project Report

1. Objective

The objective of this project is to analyze and visualize supermarket sales data using Power BI, with the goal of uncovering meaningful business insights related to sales performance, customer behavior, product demand, and profitability.

By leveraging data fields such as product line, customer type, payment method, and city, the project aims to:

- Identify top-performing branches and product lines
- Compare spending patterns across customer demographics
- Understand the impact of various factors like quantity, unit price, and rating on revenue
- Enable decision-makers to filter, explore, and act on data interactively using a dynamic dashboard

2. Key KPIs (Cards)

- Sum of Quantity
- Count Gross Income
- Total COGS
- Average Customer Rating
- Average Tax Paid

3. Slicers Implemented

- Branch
- City
- Customer Type
- Gender
- Product Line

- Payment Method
- Date (Range)

4. Visualizations Created

- Pie Chart: Sum of Gross Income by customer type.
- Donut Chart: Sum of Rating by Gender.

5. Key Insights

- Branch B generated the highest overall sales.
- Food & Beverages and Fashion accessories are top-selling product lines.
- Members tend to spend more than normal customers.
- Ewallet is the most preferred payment method.
- Higher unit prices show a slight negative correlation with customer ratings.

6. Conclusion

The Power BI dashboard created through this project effectively summarizes complex data into actionable insights. It provides a clear view of sales distribution, customer segmentation, and performance metrics that support business decision-making. With dynamic slicers and interactive visuals, the report empowers users to explore data in multiple dimensions.
